DigiCT is a measuring instrument of the breaking load for the corners of the welded PVC frames

It is made of a sturdy sheet metal box powder coated, the test area is protected by a screen that prevents possible projections of material.

The angle to be tested is locked in position and the load is applied via a cylinder hydro / pneumatic, a load cell and a digital control unit measure the force applied by recording the maximum peak.

DigiCT allows to perform measurements according to EN514 and has been reviewed and approved by the Italian Institute of Plastics (IIP)

**APPROVED**

#### GENERAL INFORMATIONS

|                     |  |
|---------------------|--|
| External dimensions | 620 x 625 x 250mm  |
| Load application    | Hydro-pneumatic cylinder with controlled positioning speed |
| Alimentation        | Pneumatic + 2 x AA batteries                               |
| Load reading system | Digital load cell (max 500 kg)                             |
| User protection     | Completely enclosed working zone                           |
